(54) Title: PATCH-LIKE INFUSION DEVICE

(57) Abstract: A packaging system and method which provides at least one tray or nest (1170), having a number of wells (1171) and ribs (1196) and (1195) to position and secure a patch-like, self-contained substance infusion device having one or more patient needles which can be placed in fluid communication with a fluid reservoir assembly within the device and upon which a disk, or Belleville spring assembly applies an essentially even and constant pressure to the contents. The device further provides for the release of one or more spring-loaded patient needles into a patient's skin surface to establish a fluid communication path between the patient needles and the pressurized fluid reservoir contents.
