(54) Title: DEVICE FOR SURFACE SAMPLING AND METHOD OF MANUFACTURING THE DEVICE

(57) Abstract: Device (1) for surface sampling, comprising: a material layer (2) comprising a surface portion (2c) and a circumferential edge portion (2d) defining the boundary of the surface portion (2c), further comprising a sampling volume (2a), wherein the sampling volume (2a) is adapted to comprise a filler device (2b) for filling out the sampling volume (2a), a protective layer (3) arranged on the surface portion (2c) of the material layer (2) by an adhesive (4) arranged on the surface portion (2c) of the material layer (2), wherein the device (1) is configured to be attached to a surface (15) by removal of the protective layer (3) to expose the adhesive layer (4) prior to attachment, wherein the device (1) is further configured to receive washing/extraction liquid in the sampling volume (2a) during attachment to the surface (15), wherein the sampling volume (2a) does not comprise a filler device (2b).
