(54) **Title:** SURFACING CROSS PLATFORM APPLICATIONS

FIG. 8

(57) **Abstract:** A utility application store may be configured to present an interface displaying multiple applications that are available from the utility application store. By accessing the interface of the utility application store, a utility supplier may, with a single request, initiate installation or activation of an application on multiple utility meters or other smart sensors in a utility communication network. The utility application store may be configured to provide notification of the availability of applications for utility meters or other smart sensors, consumer computing devices, and/or utility supplier back office computing devices. The utility application store may include one or more distributed applications that include a first portion configured for execution by a utility meter and one or more other portions configured for execution by another computing device (e.g., a personal computer, mobile device, utility supplier back office server, cloud service, or the like).
