(54) Title: HETEROGENEOUS MOTOR

(54) 发明名称: 异型电机

图 1 /Fig.1

(57) Abstract: A heterogenic motor comprises an armature assembly (400) and magnetic pole components (500), wherein the armature assembly (400) and the magnetic pole components (500) do relative movement around a common axial line (100). The armature assembly (400) and the magnetic pole components (500) form a magneto-electricity system unit (203). The magneto-electricity system unit (203) forms an axial symmetry heterogenic curve around the common axial line (100), and the axial symmetry heterogenic curve is not a plane which is perpendicular to the common axis. Through changing the structure and shape of the motor, the structure and shape of the magneto-electricity system unit (203) is changed for being suitable for the shape requirement on special application so as to improve space utilization rate of the motor.
