

ABSTRACT**A device for generating air curtains, in particular for a railway vehicle**

The device (20) comprises air curtain generating means (22, 28), including air curtain diffusing means (24, 32), able to diffuse at least one air curtain (26, 30) along the plane (P), in at least first and second different diffusion directions. The air curtain generating device (20) includes a control unit (34) able to control the diffusion of the at least one air curtain (26, 30) in one and/or the other of the first and second diffusion directions.
