**PRINTED CIRCUIT CABLE CONNECTOR
ATTACHMENT ASSEMBLY**

G00002

Abstract of the Disclosure

5 A printed circuit cable (PCC) connector attachment assembly is provided
for a disc drive. The PCC connector attachment assembly includes alignment pins
and a compressive member. The alignment pins help to align a PCC connector for
assembly and help to prevent lateral movement of the PCC connector with respect
to the base deck after assembly. In one embodiment, the alignment pins are
10 located on the PCC connector and align with pinholes provided in a base deck of
the disc drive. The compressive member has a height selected such that the
compressive member pressingly engages the PCC connector when a cover is
attached to the base deck with cover screws. Grounding pads are located between
the PCC connector and the base deck, so that the grounding pads provide a
15 grounding path from the PCC connector to the base deck.
