

HAIR WAVE FORMING METHOD

ABSTRACT

5 A hair waving method using a rod 10 and a cover 20 externally fitted to the
rod 10, the method comprising an attaching step of holding the mid section of hair
between the rod 10 and the cover 20 and sliding the rod 10 and the cover 20 toward
hair ends while applying tension to the hair, to place the hair ends between the rod
10 and the cover 20; a winding step of rotating the rod 10 together with the cover 20
10 to wind the hair around the outer circumferential surface of the cover 20; and a
securing step of attaching an elastic retainer 30 to the rod 10 so as to overlie on the
cover 20, to secure the hair wound around the cover 20. This hair waving method
makes it possible to promptly and easily wave the hair.
