

ABSTRACT**TAMPER-EVIDENT METAL PAIL AND LID**

5

A metal lid for closing a pail comprises a centre panel, a multiplicity of crimpable tabs surrounding the centre panel and a breakable feature linking at least two of the tabs and formed integrally with the tabs. The breakable feature is configured to break as a result of uncrimping of one of the at least two tabs. A container comprising a metal pail
10 defining an opening and the metal lid is also disclosed, the tabs of the lid being crimped onto the pail to close the opening.
