

METHOD OF PRODUCING FLOATING FACILITY INCLUDING NATURAL GAS
LIQUEFACTION APPARATUS

ABSTRACT

Provided is a method of producing a floating facility including a natural gas liquefaction apparatus that can achieve low cost and reduce the construction period. The natural gas liquefaction apparatus includes at least a cold end unit that liquefies natural gas. The method of producing a floating facility including a natural gas liquefaction apparatus includes a step of providing a treatment device constituting the natural gas liquefaction apparatus on a base; and a step of suspending the base, and then conveying and installing the base to a floating unit disposed on the ocean; the step of conveying and installing the base to the floating unit including a step of conveying a reinforcing member that prevents deformation of the base caused by a load applied to the base when the base is suspended, to the floating unit along with the base.
