

ABSTRACT

REFRIGERATOR

5 To facilitate replacement or repair of a sensor for refrigerant leakage detection (35)
used for a refrigerator for a storage box such as a container in case of breakdown, a sensor for
refrigerant leakage detection (35) is disposed outside of an internal space (S2, S3) of a storage
box (11), and an internal air guide passage (36) is provided which guides internal air from a
discharge side of a fan (26) provided in the internal space (S2, S3) of the storage box (11) to
10 the sensor for refrigerant leakage detection (35).
