(54) Title: INDICATOR ASSEMBLY OF A SUPPORTING LEG DEVICE FOR A SAFETY SEAT AND SAFETY SEAT

Fig.5

(57) Abstract: An indicator assembly of a supporting leg device for a safety seat and a safety seat are provided. The indicator assembly includes an indicator housing having an indicator window; an indicating member including a first area and a second area adjacent to each other; a first elastic member for pivoting the indicating member to a first position in a first direction such that the first area is exposed from the indicator window; a pushing member, a top end of which pushing the indicating member to pivot to a second position in a second direction; a driving member including an upper end provided with an engaging hook and a lower end capable of touching a floor, in which the engaging hook can be engaged into the engaging hole of the pushing member; when the lower end of the driving member touches the floor, the driving member drives the pushing member to move upward, thereby pushing the indicating member to pivot to a second position in the second direction, so that the second area is exposed from the indicator window. According to the indicator assembly of the present disclosure, a user can observe whether the supporting leg device touches the floor of a vehicle without leaning over.
