(54) Title: TETRAHYDRO GAMMA–CARBOLINES

(I)

(57) Abstract

The present invention concerns the compounds of formula (I), the *N*–oxide forms, the pharmaceutically acceptable addition salts and the stereochemically isomeric forms thereof, wherein R^1 is hydrogen, optionally substituted C_{1-6}alkyl, aryl; R^2 is each independently a halogen, hydroxy, C_{1-6}alkyl, C_{1-6}alkyloxy or nitro; n is 0, 1, 2 ou 3; Alk is C_{1-6}alkanediyl; D is optionally substituted saturated or unsaturated nitrogen containing heterocycle; and aryl is optionally substituted phenyl; having a great therapeutic breadth. It further relates to their use as a medecine, their preparation as well as compositions containing them.
