

ABSTRACT

[Abstract]

[Object] Provided is a cosmetic eyelid-reshaping tape having improved adhesion to the skin of the eyelid and a method for manufacturing the same, the cosmetic
5 eyelid-reshaping tape including a tape-like member formed of a long narrow extensible base material piece having elastic contractility even after being extended and adhesive applied thereto, the cosmetic eyelid-reshaping tape being configured to form, in the eyelid, a depression extending along the tape-like member by utilizing the elastic contractility of the base material piece after
10 being extended.

[Solution] In a cosmetic eyelid-reshaping tape 1 including a tape-like member 2, which is formed of a long narrow extensible base material piece 3 having elastic contractility even after being extended and adhesive 4 applied to both surfaces thereof, and release sheet pieces 5, which are attached to the adhesive on both
15 surfaces of the tape-like member, are formed in the same shape as the tape-like member, and have easy-to-tear portions 5a in the middle thereof, wave-shaped protruding portions 22 and 23 are formed, so as to protrude, over the entire side edges of the tape-like member in the longitudinal direction.
