(54) Title: NEBULISER

(57) Abstract: A nebuliser (1) for a fluid, particularly for medical aerosol treatment is proposed. To allow easier operation and confer improved operational reliability a sealed container (3) holding the fluid is already arranged in the nebuliser when it is supplied and the nebuliser is constructed so that the container is opened inside the nebuliser before or during the first use of the nebuliser. Alternatively, or in addition, the nebuliser is constructed so that the container cannot be replaced and in particular cannot be removed.
