

Abstract of the Disclosure

A polishing tool comprising a support member, and
polishing means fixed to the support member. The
5 polishing means is composed of felt having a density of
0.20 g/cm³ or more and a hardness of 30 or more, and
abrasive grains dispersed in the felt. A polishing method
and apparatus involving pressing the polishing means
against a surface of a workpiece to be polished, while
10 rotating the workpiece and also rotating the polishing
tool.
