USES THEREOF

FIG. 7

(57) Abstract: Methods of assessing, such as characterizing or determining, condensate-associated characteristics of a compound, such as a test compound, and applications thereof are provided. For example, methods of determining a partition characteristic of a test compound in a target condensate, methods of determining a relative partition characteristic of a test compound in a target condensate, and methods of determining a condensate preference profile of a test compound are provided. Additionally, methods of designing and/or identifying and/or making a compound, or portion thereof, with a desired relative condensate partition characteristic are provided.
