

IMAGE RECOGNITION DEVICE

ABSTRACT

5

The image recognition device includes an imaging means for generating an image of a subject, a local area storage means for storing information relating to a local area set in an imaging screen of the imaging means, and an image data processing means for performing exposure control of the imaging means and image recognition processing, based on the image
10 within the local area specified by the information stored in the local area storage means, of the image generated by the imaging means.
