What Is Claimed Is:

1. A hyaluronic acid composition for use in the treatment of androgenetic alopecia (AGA) in a patient in need thereof, comprising:

administering to a skin of the patient, a composition comprising up to about 1 wt% hyaluronic acid for at least 2 times a week,

wherein the hyaluronic acid is not cross-linked,and

wherein the hyaluronic acid comprises an average molecular weight of up to about 100 kDa;

thereby treating AGA.

2. The use of of claim 1, wherein the composition is administered to the patient on consecutive days in the week.

3. The use of claim 1, wherein the composition is administered via an intradermal injection, optionally when:

the composition is injected about 0.1 mm or more deep into the skin, or

the composition is administered at or proximal to a stem cell area of a follicle.

4. The use of claim 1, wherein the composition is administered to the skin by injection, optionally wherein the injection area is about 4 cm^2 or more, or

wherein the composition is administered to the skin comprising one or more of a frontotemporal region of a scalp of the patient and a vertex region of a scalp of the patient, optionally wherein the hyaluronic acid stimulates hair growth in the frontotemporal region of the scalp of the patient and/or the vertex region of the scalp of the patient.

5. The use of claim 1, wherein treatment with the composition improves or increases one or more of:

a) Target area hair count (TAHC);

b) Target area hair width (TAHW); and

c) Hair darkness, optionally wherein said improvement or increase is measured from about 10 days to about 160 days after administering the composition, or

wherein an onset of hair loss in the patient is about three to five years prior to administering the composition, or

wherein an onset of hair loss in the patient is about ten years prior to administering the composition, or

wherein the patient has previously received a hair transplantation, or

wherein the patient has received the hair transplantation about one month to about two months prior to administering the composition.

6. The use of claim 1, wherein the AGA is mild AGA or moderate AGA.

7. The use of claim 1, wherein the patient has received a Modified Norwood Hamilton Scale score of III, or a Modified Norwood Hamilton Scale score of IV, or

wherein the patient has previously experienced hair loss.

8. A hyaluronic acid composition for use in the treatment of hair loss in a skin of a patient in need thereof, comprising:

administering to the skin of the patient, a composition comprising up to about 1 wt % hyaluronic acid for about at least 2 times a week,

wherein the hyaluronic acid is not cross-linked, and

wherein the hyaluronic acid comprises an average molecular weight of up to about 100 kDa, thereby stimulating hair growth in the skin of the patient.

9. A hyaluronic acid composition for use in stimulating hair growth in a patient in need thereof, comprising:

administering to a skin of the patient, a composition comprising up to about 1 wt % hyaluronic acid at least 2 times a week;

wherein the hyaluronic acid is not cross-linked; and

wherein the hyaluronic acid comprises an average molecular weight of up to about 100 kDa.

10. The use of claim 8 or claim 9, wherein the composition is administered to the patient on consecutive days in the week, or

wherein the composition is administered via an intradermal injection, optionally wherein:

the composition is injected about 0.1 mm or more, deep into the skin, or

the composition is administered at or proximal to a stem cell area of a follicle, or

the injection area is about 4 cm^2 or more, or

wherein the composition is administered to the skin comprising one or more of a frontotemporal region of a scalp of the patient and a vertex region of a scalp of the patient.
