

ABSTRACT OF THE DISCLOSURE

A system for previewing protected media comprising a touchscreen display, a processor, and a memory having executable instructions stored thereon that when executed by the processor cause the processor to receive an original image from a server over a network, generate a blurred copy of the original image, overlay the blurred image over the original image, detect user interaction on the touchscreen display, determine location of the user interaction, and apply a mask on a section of the blurred copy of the original image corresponding to the determined location of the user interaction.
