

## **ABSTRACT**

### **Display Device**

A display device including a display panel, a film, a flexible connecting unit, a first glue, and a second glue. The film is stacked on an outer surface of the display panel and has an extension portion extending out of the outer surface. The flexible connecting unit connects to the display panel and extends out from a first end of the display panel. A gap exists between the flexible connecting unit and the extension portion while the first glue is at least partially distributed within the gap. The second glue at least partially distributed between the flexible connecting unit and the edge of the first end, and the second glue is different from the first glue.
