

ABSTRACT

INFORMATION SHARING SUPPORT APPARATUS, SYSTEM, METHOD, AND PROGRAM

5

An information sharing support apparatus, that is communicably connected to a plurality of terminals and supports information sharing between/among the terminals, wherein the apparatus comprises: an
10 information addition part configured to perform an add-processing of tag information to designated position(s) in three-dimensional point group data, based on additional information including a designated position(s) and tag information acquired from any one of
15 terminals connected to the apparatus; and a data provision part configured to synchronously provide the three-dimensional point group data add-processed by the information addition part to all of the terminals connected to the information sharing support apparatus.
