(54) Title: DEVICE AND METHOD FOR NON-INVASIVE MEASUREMENT OF THE INDIVIDUAL METABOLIC RATE OF
A SUBSTANTIALLY SPHERICAL METABOLIZING PARTICLE

(57) Abstract: The present invention relates to methods and devices for non-invasive and non-disturbing measurements of metabo-
lizing rates of substantially spherical metabolizing particles, such as an embryo, and to a method and device of controlling oxygen
partial pressure at the level of the embryo. Furthermore, the invention relates to a method for regulating supply of metabolites to
a substantially spherical metabolizing particle, as well as a method for selecting substantially spherical metabolizing particles of a
predetermined quality. The invention is carried out in a device capable of establishing a diffusion gradient of metabolites between
the substantially spherical metabolizing particle inside a compartment in the device and the environment outside the compartment.
The metabolizing rate is determined based on information of the metabolite diffusion gradient.
