ABSTRACT

DISCOLORATION APPARATUS FOR CIRCULAR KNITTING MACHINES

A discoloration apparatus for a circular knitting machine includes a control mechanism, an operation mechanism driven by the control mechanism, an
10 adjusting mechanism mounted onto the control mechanism and a release mechanism located in the operation mechanism. The discoloration apparatus is installed on the circular knitting machine and is controlled by the yarn releasing and receiving cam and the color selection device, and may feed
15 discolored yarns to the knitting needles to produce discolored jacquard knitting fabrics.
