

CORROSIVE ANION REMOVAL DEVICE AND ANION EXCHANGE RESIN
REGENERATION METHOD

ABSTRACT

[Problem] A corrosive anion removal device and an anion exchange resin regeneration method, the device being capable of being easily handled and preventing corrosion, are provided.

[Solving Means] The present invention is directed to a corrosive anion removal device 10 having an anion exchange resin 12 configured to replace a corrosive anion included in water supplied in a pipeline 11 and then generate anion exchange treatment water, and is characterized by including a regeneration path 17 configured to bring only a NaHCO_3 water solution diluted by tap water, into contact with an anion exchange resin 12 at the time of regeneration of the anion exchange resin 12.
