

ABSTRACT

DIAPHRAGM VALVE AND METHOD OF ASSEMBLING THE SAME

Provided is a diaphragm valve that prevents the application of excessive load on a diaphragm due to excessive tightening, and a method of assembling such a diaphragm valve. A female screw member 18 is screwed to an upper end portion of a male screw portion 11 provided on a stem 3. When the stem 3 reaches an appropriate close position, the female screw member 18 comes in contact with an upper end of a bonnet 5 thereby preventing the stem 3 from moving downward further.
