(54) Title: ADAPTIVE RECOVERY FOR DIGITAL IDENTITY PLATFORM

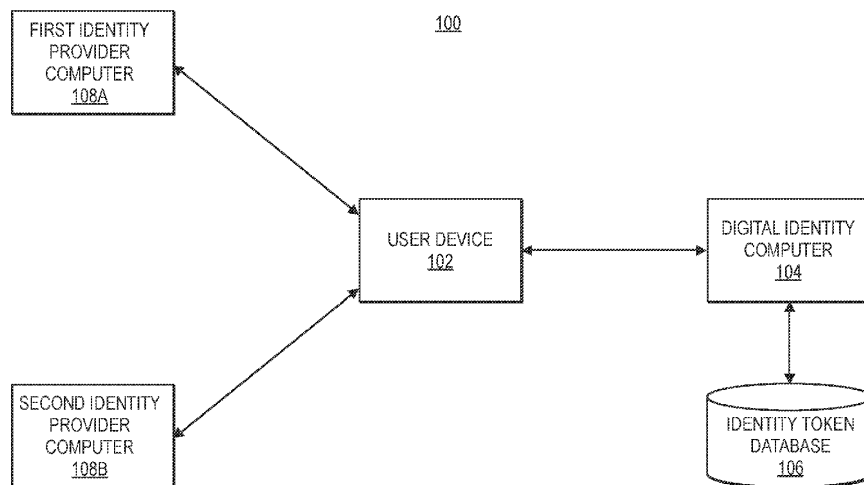

FIG. 1

(57) Abstract: A method, performed by a digital identity computer, for processing a resource request is disclosed. The method includes receiving, from a user device operated by a user, a resource request and indication of identity attributes needed to process the resource request. The digital identity computer may then retrieve an identity token associated with the user and compute an authentication score based on the sensitivity and rarity of the identity attributes indicated. The authentication score can be used to determine an authentication process. After determining and executing the authentication process with the user device, the digital identity computer may then grant the user device access to the resource requested.
