

ABSTRACT

5 Disclosed are a method and apparatus for generating a special deformation
effect program file packet, and a method and apparatus for generating special
deformation effects. The method for generating a special deformation effect program
file packet comprises: acquiring parameter values of deformation effect parameters of
at least one deformation region; establishing a correlation between the at least one
10 deformation region and at least one predetermined key point; and according to the at
least one deformation region, the parameter values of which have been acquired, and
the correlation, generating a special deformation effect program file packet. According
to the embodiments of the present application, a special deformation effect program file
that can be executed by a render engine can be generated, without writing a program file
15 by hand, the operation is simple and the required time is short, thus improving the
overall efficiency of realizing special deformation effects and effectively guaranteeing
the accuracy of the special deformation effects.
