(54) Title: METHODS FOR THE DIAGNOSIS OF DEMENTIA AND OTHER NEUROLOGICAL DISORDERS

(57) Abstract: The present invention is directed to a method for differentially diagnosing dementia or the risk of dementia in a patient. The method comprises obtaining a sample from the patient; analyzing the sample to obtain quantifying data for one or more than one metabolite marker; comparing the quantifying data for the one or more than one metabolite marker to corresponding data obtained from one or more than one reference sample; and using the comparison to differentially diagnose dementia or the risk of dementia. The method may also assist in assessing dementia or the risk of dementia in a patient. The present invention is also directed to metabolite markers and compounds useful in the present method.
