

ABSTRACT

Provided is a range hood having a small pressure loss and a good oil gathering efficiency.

A range hood 1 is provided with a fan 60 configured to generate a flow of air, a filter 10 which is present on an upstream side of the fan 60 on a flow path of the flow of air and has holes that allow the flow of air to pass through, an electric motor 20 configured to rotate the filter 10, and an oil content gathering member 30 that surrounds the periphery of the filter, in which the fan 60 generates the flow of air, and the electric motor 20 rotates the filter 10, so as to gather the oil contents contained in the air to the oil content gathering member 30.
