(54) **Title:** SYSTEMS AND METHODS FOR LOCATING A GUEST IN A FACILITY FOR ORDER DELIVERY

FIG. 1

(57) **Abstract:** A delivery system may include one or more processors and memory storing instructions executable by the one or more processors to cause the one or more processors to identify one or more attributes of a user in one or more images and associate the one or more attributes of the user with an order placed by the user. The delivery system may also track the one or more attributes of the user in the one or more images over time to identify movement of the user within an environment and in response to the one or more attributes of the user in the one or more images remaining at a location for more than a threshold time, create an association between the one or more attributes of the user and the location. The delivery system may then provide an instruction to deliver items in the order to the location.
