ABSTRACT

An information processing apparatus configured to select one or more of a plurality of photographing apparatuses which capture a photographic image satisfying at least one of a plurality of expectation conditions and a requisite condition is provided.

The information processing apparatus 100 has an expectation condition information acquisition section 140 for acquiring expectation condition information which indicates a plurality of expectation conditions, a requisite condition information acquisition section 150 for acquiring requisite condition information, a photographing apparatus state information acquisition section 160 for acquiring photographing apparatus state information, an object state information acquisition section 130 for acquiring object state information and a photographing apparatus selection section 170 for selecting a photographing apparatus which captures a photographic image. The photographing apparatus selection section 170 has an expectation condition determination section 172 for deciding whether at least one of the expectation conditions is satisfied or not and a requisite condition determination section 173 for deciding whether the requisite condition is satisfied or not.
