

INSECT TRAP

ABSTRACT

Provided is an insect trap including: a collecting part having a space therein for collecting an insect to be captured; an attracting part for generating an attracting medium for attracting the insect into the collecting part; and a capturing part for capturing the insect inside the collecting part. The collecting part has an inlet through which the insect passes into the collecting part, and the inlet has: an opening for communication between inside and outside the collecting part; and a closing part that partially closes the opening and configured to allow the attracting medium to pass therethrough from the inside of the collecting part to the outside of the collecting part.
