100
102
Determining geographical coordinates for a mobile device displaying data for another well
104
Locating a preferred well in a list of wells by comparing geographical coordinates for each well in the list of wells with the geographical coordinates for the mobile device and automatically designating a well with geographical coordinates closest to the geographical coordinates for the mobile device as the preferred well
106
Displaying data for the preferred well on the mobile device by automatically replacing the data for another well with the data for the preferred well
End
