(57) Abstract: A live streaming picture data processing method and apparatus, a device, a storage medium, and a program, relating to the technical field of virtual scenes. The method comprises: displaying (201, 301) a live streaming interface of a virtual scene, the virtual scene corresponding to live streaming pictures of n viewing angles, wherein n is greater than or equal to 2, and n is an integer; displaying (202, 302) a live streaming picture of a first viewing angle and a split-screen control in the live streaming interface according to obtained live streaming picture data of the first viewing angle, the first viewing angle being one of the n viewing angles; and in response to receiving a trigger operation on the split-screen control, displaying (203, 303), in a split-screen manner, live streaming pictures of m viewing angles in the live streaming interface according to obtained live streaming picture data of the m viewing angles of the n viewing angles, wherein $2 \leq m \leq n$, and m is an integer. By adoption of the method, apparatus, device, storage medium, and program, the data processing efficiency can be improved, user operation is simplified, the human-computer interaction efficiency is improved, and the operating pressure of a server is reduced.
