

METHOD OF PRODUCING A LUBRICANT FOR A MAGNETIC DISK,
LUBRICANT FOR A MAGNETIC DISK, MAGNETIC DISK, AND
METHOD OF PRODUCING A MAGNETIC DISK

Abstract of the Disclosure:

On producing a lubricant which is used in making a lubrication layer included in a magnetic disk from the lubricant, a phosphorus-containing compound is removed from a raw-material lubricant including the phosphorus-containing compound to produce the lubricant. The magnetic disk includes a substrate on which at least a magnetic layer, a protection layer, and the lubrication layer formed by the use of the lubricant are successively formed.
