Abstract

## DYNAMIC CURRENCY CONVERSION TRANSACTION SYSTEM

A computer implemented method and system for performing an Integrated Circuit Card (ICC) transaction between a card holder and a merchant is provided. The data present on the ICC is searched (53) to determine the card issuer currency. The card issuer currency is compared (55) with the currency used by the merchant. If the currencies are different, then the amount of the transaction is the currency of the card issuer is determined (59) and provided for authorization (62, 63, 64).
