(54) Title: APPARATUS AND METHOD FOR BIOELECTRIC STIMULATION, HEALING ACCELERATION AND PAIN RELIEF

(57) Abstract: An apparatus and method for generating an electrical signal for use in biomedical applications, including two timing blocks for generating timing intervals T_1- T_7, an interconnection block for combining these intervals into an output signal having predetermined relationships among the intervals, an output block for transmitting the output signal to a load, and, optionally, a filter for removing unwanted frequency components from the output signal and an adjustment block for selecting from among a plurality of output signals with predetermined characteristics. The output is a repeating succession of a burst of rectangular waves, an equalizing pulse (if needed) to cancel net DC bias in applications for which it is not desired, and a rest period of no signal. In applications where net DC bias is desired, the equalizing pulse may be omitted and the remaining signal features superimposed on a DC potential.
