On Your Feet

Measuring For Your Correct Size:

Place the Arch Supports package on the floor, up against a wall. Put your sock or stocking foot next to the package, with your heel also up against the wall. The measure lines on the package should be next to the inside of your foot. Lift up your biggest toe so you can see the large round ball joint.

Find the line on the package that falls just behind that joint. That is your size! It is better to have the Arch Support a little too short when wearing it, than to allow it to touch your ball joint. If you are not sure, buy the shorter size!

DIABETICS,
see your doctor
first before wearing
these Arch
Supports.
