

ABSTRACT

SEALABLE SHEET

[Problem to be Solved]

To provide a sealable sheet capable of compatibly achieving suppression of contamination to the surroundings during sealing, and suppression of warping after sealing.

[Solution]

A sealable sheet 1 for sealing an electronic element 51 includes a first layer 2 and a second layer 3 sequentially toward the upper side. The first layer 2 is in contact with the electronic element 51 when sealing the electronic element 51. The second layer 3 is exposed outwardly when sealing the electronic element 51. The first layer 2 and the second layer 3 have thermosetting properties. The lower surface of the first layer 2 is harder than the upper surface of the second layer 3 at 90°C, and the elastic modulus of the second layer 3 after thermal curing is larger than that of the first layer 2 after thermal curing.
