(54) Title: FIREARM SIGHTING ASSEMBLY

(57) Abstract: A firearm sighting assembly is disclosed which comprises a fixture (12) for connecting the assembly to a firearm (80). The fixture (12) carries a swivel mounting (56, 57) for mounting a display (18) and image acquisition device (30). The display (18) is pivotally mounted to the acquisition device (30) by swivel mountings (36 and 40) which enable a display (18) mounted on the swivel mountings to be swivelled into a position where the display can be viewed by a user whilst the user remains undercover or around the corner relative to the rifle (80). The mounting (56, 57) enables the assembly (10) to be moved from an in use position in which it occludes the aiming sight (81) of the rifle (80) to a stowed position so direct aiming through the sight (81) can be performed by the user if desired.
