

ABSTRACT

5

A FILE MANAGEMENT SYSTEM AND METHOD

This invention relates to a file management system that comprises a server (110) for managing operations of the system; a database (120) for storing at least one file; a platform (200) for providing at least one interface for managing the file; a categorizing
10 module (130) for establishing one or more categories for the file; and a storing module (140) for storing the file to the database (120) upon assigning the file to at least one category accordingly; wherein the stored files include email that are retrievable based on the assigned category through the platform by a retrieval module (150).
