(54) **Title:** PREFILLED CUTANEOUS PATCH WITH LANDMARK

FIG. 1

(57) **Abstract:** A prefilled cutaneous patch is provided for testing for allergic contact dermatitis and/or skin sensitivity. The patch comprises one or more wells containing ingredients that may be mixed with a suitable base (e.g., petrolatum, an aqueous solution, an anhydrous compound). The patch further comprises a backing that features an adhesive surface for adhering to a user's skin, and one or more landmarks that facilitate marking of the skin to visually demonstrate an orientation of the applied patch (e.g., which end is up, locations of wells). A landmark may comprise a dye or ink, which may be installed in one or more wells or elsewhere on the patch such that it is transferred to the user's skin when the patch is applied. Also, or alternatively, a landmark may comprise a stencil through which the user may mark the skin with a pattern that promotes interpretation of the results of the testing.
