(54) Title: LIGHT SOURCE

(57) Abstract: A lens has a body shaped to project light from a single compact source approximating a point source. The source projects light onto an inward facing surface of a sign panel, and the source is mounted adjacent to one edge of the sign panel. The lens body has a primary axis and a lateral axis perpendicular to the primary axis, whereby the lens body is intended to be mounted with the primary axis passing through a central plane of the sign assembly in a first direction of the sign assembly and the lateral axis is intended to pass through the central plane of the sign assembly in a second lateral direction of the sign assembly.
