

IMAGE PROCESSING METHOD AND APPARATUS, AND ELECTRONIC DEVICE AND STORAGE MEDIUM

ABSTRACT

An image processing method and apparatus, and an electronic device and a storage medium, which relate to the field of image processing, and solve the problem of the image quality of different permission areas in an image being relatively poor after the image is decoded and filtered. The image processing method, which is executed by an electronic device, comprises: dividing an image to be processed into a plurality of image sub-areas, and acquiring the permission level of each image sub-area; and if the permission levels of at least two adjacent image sub-areas among the plurality of image sub-areas are different, performing filtering processing on a connection boundary between the at least two image sub-areas.
