(54) Title: A METHOD OF TRANSDUCTION

FIG. 1

(57) Abstract: A method of transducing T cells, comprising providing a compressible container including a base, a top arranged substantially in parallel to said base, and at least one flexible wall element extending between said top and said base and defining an internal volume of said compressible container. A population of T cells in a cell processing medium is added into said internal volume. A transduction agent is added into said internal volume. The base of the compressible container is moved with respect to said top, thereby causing turbulence of the contents in said internal volume, for a first period of time.
