Solid active compound preparations

Abstract

Solid preparations are obtainable by melt extrusion of

A) at least one active compound,

B) a mixture of

B1) from 10 to 90% by weight of a water-soluble, thermoplastic polymer, and

B2) from 10 to 90% by weight of a low-substituted hydroxypropylcellulose, and

C) from 0 to 50% by weight, based on the total amount of the preparation, of customary pharmaceutical auxiliaries.
