(54) Title: INTERMITTENT DOSING OF MDM2 INHIBITOR

Figure 1

(57) Abstract: The present disclosure relates to mdm2 inhibitors for use in specific dosing schedules. It was found that if sufficiently potent or, in alternative, sufficiently high dose of a Mdm2 inhibitor is used, it can cause antineoplastic effect by triggering much longer lasting antiproliferative mechanism in cells. The long lasting effect can sustain for several weeks after a single dose, which eliminates the need for daily treatment and allows administering the Mdm2i intermittently. A treatment with the intermittent dosing schedule of a Mdm2 inhibitor can be combined with a daily treatment of the Mdm2i or with another pharmaceutically acceptable ingredient.
