(54) Title: METHOD FOR JITTER COMPENSATION DURING RECEIPT OF VOICE CONTENT OVER IP-BASED NETWORKS AND RECEIVER FOR THAT AND METHOD AND DEVICE FOR SENDING AND RECEIVING VOICE CONTENT WITH JITTER COMPENSATION

Fig.4

(57) Abstract: A jitter compensation during receipt of voice content (1, 2, 3, 4) via IP-based networks in voice packets (110, 120, 210) with a header (H) and payload (PL) is described, wherein a piece of time information of a transmitter time of a transmitter, which indicates the time of sending (ts) of the voice packet (110, 120; 210), is contained in the voice packet (110, 120; 210). It is provided that the receiver initializes a receiver clock using a transmitter time by means of the time information in the initial packet, that the receiver determines a minimum relative packet transmission duration (delta) after the initialization of the receiver clock, adjusts the receiver time as a function of the minimum relative packet transmission duration (delta), during the receipt of a first voice packet (111) with voice content, determines the actual time of receipt of this voice packet and determines the buffer (DJB) as a function of the actual time of receipt
