ELECTRICAL CONNECTOR

ABSTRACT

An electrical connector, of the type constituted by a box-like body (11) with a closure cover (12) which is associated therewith by means of a film hinge (13) and inside which there is at least one first seat (14), with an opening (15) for access on the part of the cover (12), for a female electrical connection terminal (16) for an electrical cable (17) and at least one optional contiguous second seat (18), which is open onto a corresponding first seat (14), for a male electrical terminal (19) to be mated with the female terminal (16); at the free end of the cover (12) there is at least one tab (20) in which there is an engagement slot (21) for a corresponding tooth (22) which protrudes from the box-like body (11). At the edge (23) of the box-like body (11) arranged between the film hinge (13) and the at least one opening (15) for accessing the corresponding first seat (14) there is a space (24) for the free flexing of the film hinge (13).
