Claims

1. A method of producing lignocellulolytic enzymes from empty fruit bunches, the method comprising:
   incubating white-rot fungal strain is *P. sanguineus* (GanoBF2) on growth substrates that comprises the empty fruit bunches mixed with rice branand;
   cultivating the strain in the fermentation process under conditions wherein the fungus expresses the lignocellulolytic enzymes.

2. The method of claim 1, wherein the fermentation process is solid state fermentation process.

3. The method of claim 1, wherein the lignocellulolytic enzymes comprise laccase, CMCase, xylanase and amylase.

4. The method of claim 1, wherein the pH of the formulation was within the range of 4.5-4.8.
